Biodiesel

Producing your own Biodiesel from used Food oil or fresh vegetable oil 150 – 450 Liter / day

With the long experience and success in the Biodiesel business in Germany, we have our technological back office RHB GmbH in Berlin which cooperates with other EU-leading companies like in this case: GREEN FUELS UK. The small-scale biodiesel system is already a success in Europe and the US. So the managing directors of ROYAL EQUIPMENT and IBAT Asia Co., Ltd. decided to introduce this innovative technology to Thailand and to show for everybody how easy it might be to produce your own biodiesel reaching the high EU-Standard.

Especially on the islands where many tourists spend their holidays and in small villages the people using their own used cooking oil for biodiesel production and, hence, reducing the cost for generators or their own pick ups dramatically

IBAT Asia Co., Ltd. is a Thailand based company which is specialized in technology transfer and engineering in various fields of environmental and renewable technology like organic farming, biodiesel, biogas for municipals or private persons.

The high quality of our products is guaranteed to import and to adapt equipment for Thailand from experienced German and British companies.

Final products: The Biodiesel and Glycerine

For Thailand this system is very suitable because :

- It is highly effective
- Low operation & maintenance cost
- Low acquisition costs
- Low accident sensitivity
- Most components of the facility can be locally acquired
- Environmentally friendly technology

The Biodiesel plant is tested in Thailand
